ATEX

Atmosphere Explosible

The so-called Atex directive deals with explosion danger at the workplace, where dust explosions are one of the known ones phenomena. In the powder paint industry, powder dust is one of those important factors. The risk of dust explosions is present, However, it is something that very rarely happens but it can happen. To facilitate work with ATEX "APV" we have applied our safety data sheets with explosion limits in air in section 9. (physical / chemical properties).

Kind regards
